

# DECO<sup>★</sup>WALL

ALUMINIUM CLADDING SYSTEM

◆ *With four vertical profiles – narrow, wide, deep and open – and one horizontal profile, DecoWall provides the ultimate in design flexibility for any residential or commercial project*

## Enhance the appearance of YOUR FACADE

The DecoWall aluminium cladding system perfectly matches contemporary architecture, with the range providing an elegant solution that will enhance the appearance of any structure.

The facade cladding features vertical and horizontal profiles in a range of designs, which are simply clipped into position. With this invisible fixing, and the system's stylish straight lines, DecoWall lends a sleek and modern appearance to new build or refurbishment projects.

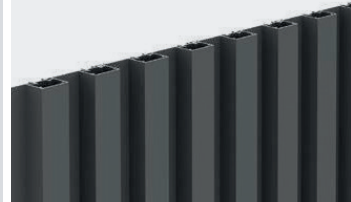

The innovative facade cladding system consists of several base profiles, including start, transition, corner and end profiles, all of which can be finished in any colour from our extensive palette.

- ◆ **Finishing profiles simply clipped into position**
- ◆ **Invisible fixings**
- ◆ **Choice of five different finishing profiles**
- ◆ **Huge range of colour options**
- ◆ **25 year paint guarantee**

### DECOWALL THE PERFECT COMBINATION OF STYLE & QUALITY

Choice of five finishing profiles; four vertical and one horizontal installation.

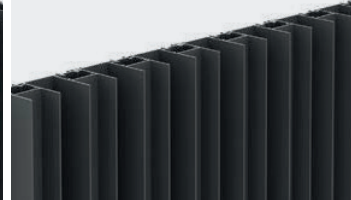

The **DW230** is the low vertical profile. The finishing profiles have a width of 30mm and a depth of 20mm.

The vertical profiles of the **DW231** are 40mm deep. The dark shadows between the profiles emphasise the straight lines of the facade cladding.

The **DW232** is a U-profile. The vertical profiles have a slender open side, which can be filled in with colours or lighting as desired.

The vertical profiles of the **DW240** are 80mm wide. These more subtle lines are ideal for larger areas.

The **DW233** is a horizontal profile. The sloping top ensures that no water remains on the profiles.
